**Speaker : Mr. Henry Shiu
Managing Director
Fugro (HK) Ltd.**

Mr. Shiu has over 24-year experience in consulting firm and is currently leading the Rebar Cage Stability Working Group of the HK Temporary Works Forum, which has published a document “Reinforcement Cage Design & Construction – A Guide to Good Practice”.

Abstract:

Reinforcement cage fabrication and erection is one of the most important activities in construction projects. However, it's risk during construction is also the most underestimated. Assessment of their temporary stability during lifting and prior to concreting has limited guidance and is most commonly dealt with by custom and practice. There have been known collapses that have caused both death and injury. This presentation aims to provide examples of previous reinforcement cage collapse, highlight key issues and provide recommended engineering and good practice associated with reinforcement cage stability in Hong Kong.
